

Energy surcharge for LambertsGlas®

Please be advised, our costs for energy and gas have increased enormously since the end of 2004. These increases forced us to install an energy surcharge that began in March of 2006.

Following the tables used by the glass industry since 2004, we will calculate energy surcharges per square metre for mouthblown sheet glasses and cast Table-Cathedral-Glasses. The energy surcharge will be declared at the end of each invoice to make it easily identifiable. Please refer to the below table.

The valid rate for a quarter will be fixed on 15th of the month before according to the conclusion index. The relevant value is the IPE-BRENT-INDEX (crude oil price, London Stock Exchange) at that day. The current surcharge will be found at our website www.lamberts.de under "News"!

This method of calculation ensures that we can reduce or stop the energy surcharge again if energy costs eventually decrease to a lower level. Please allow us to point out that this energy surcharge does not cover all of our additional costs!

If the IPE-BRENT-INDEX is \leq US \$30,00 we will charge without energy surcharge.
If the IPE-BRENT-INDEX is exactly between two steps we will calculate the lower one.

IPE-BRENT-INDEX (costs per barrel crude oil; source: rohstoffe.onvista.de)	ENERGY SURCHARGE IN EUR PER SQ.M. (no discounts are possible)	IPE-BRENT-INDEX (costs per barrel crude oil; source: rohstoffe.onvista.de)	ENERGY SURCHARGE IN EUR PER SQ.M. (no discounts are possible)
US \$10 - US \$30 (normal historical price)	EUR 0,00	US \$94 - US \$98	EUR 8,50
